Filter:

0. Create project

1. Split 16959 cell(s) in column date into several columns by separator

2. Rename column date 1 to year

3. Rename column date 2 to month

4. Rename column date 3 to day

5. Create new column repaired_date based on column language by filling 16959 rows with `grel:cells.year.value+'-'+cells.month.value+'-'+cells.day.value`

6. Mass edit 5597 cells in column event

7. Text transform on 17545 cells in column dish_count: `value.toNumber()`8. Text transform on 202 cells in column event: `value.toUppercase()`9. Text transform on 16959 cells in column year: `grel:value+1`

Extract Operation History

Extract and save parts of your operation history as JSON that you can apply to this or other projects in the future.

☒ Split column date by separator☒ Rename column date 1 to year☒ Rename column date 2 to month☐ Rename column date 3 to day☒ Create column repaired_date at index 12 based on column language using expression `grel:cells.year.value+'-'+cells.month.value+'-'+cells.day.value`☒ Mass edit cells in column event☒ Text transform on cells in column dish_count using expression `value.toNumber()`☒ Text transform on cells in column event using expression `value.toUppercase()`☒ Text transform on cells in column year using expression `grel:value+1`
